## notes 2.4 - understanding Scientific hotation

What is the point of using scientific notation?

Any number can be written in scientific notation by expressing it in two parts: a
$\qquad$ $\boldsymbol{A}$ where $1 \leq A<10$, and a power of 10 where the exponent is an integer.

## A $\quad \mathbf{1 0}^{\boldsymbol{n}}$

Tell whether each number is written correctly in scientific notation. If it is incorrectly written, state the reason.
1.) A horse-chestnut has a diameter of about $2 \cdot 10^{\circ}$ centimeters.
2.) Neptune is about $4.488 \cdot 10^{9}$ kilometers from the sun.
3.) The approximate wavelength of infrared light is $0.01 \cdot 10^{-5}$ meter.
4.) A football field (excluding zones) is $10 \cdot 10^{1}$ yards long.

Write each number in scientific notation.

5.) 427.7
6.) 0.007
7.) 8562.1
8.) 0.06
9.) $7.1 \cdot 10^{3}$
10.) $8.12 \cdot 10^{-3}$
11.) $9 \cdot 10^{4}$
12.) $2.5 \cdot 10^{-2}$

Identify the greater number in each pair of numbers. Justify your reasoning.
13.) $5.6 \cdot 10^{2}$ and $2.1 \cdot 10^{3}$
14.) $3.4 \cdot 10^{-1}$ and $1.1 \cdot 10^{-1}$

## Motes 2.2 - Adjursting Mumbars to Scientific Motation

Find the products or the quotients below.
1.) $5.83 \cdot 10$
2.) $489 \cdot 100$
3.) $102.4 \cdot 1000$
4.) $3.89 \div 10$
5.) $93.5 \div 100$
6.) $2.935 \div 1000$

Rewrite each number below so it is in scientific notation.
7.) 18.5
8.) 957.3
9.) . 081
10.) 0.077

Rewrite each of the numbers below so they are written in scientific notation.
11.) $45.7 \cdot 10^{8}$
12.) $0.085 \cdot 10^{5}$
13.) $5821 \cdot 10^{-7}$
14.) $0.000353 \cdot 10^{-4}$

Rewrite each of the following examples as a product of a coefficient and $10^{3}$.
1.) $3.7 \cdot 10^{5}$
2.) $4.1 \cdot 10^{2}$

Steps to Multiplying Numbers in Scientific Notation

1. $\qquad$ the coefficients.
2. $\qquad$ the exponents.
3. $\qquad$ the result to scientific notation.

Steps to Dividing Numbers in Scientific Notation

1. $\qquad$ the coefficients.
2. $\qquad$ the exponents.
3. $\qquad$ the result to scientific notation.
3.) $\left(43 \cdot 10^{9}\right) \cdot\left(7 \cdot 10^{4}\right)$
4.) $\left(5.1 \cdot 10^{-8}\right) \cdot\left(2.5 \cdot 10^{3}\right)$
5.) $\frac{230 \cdot 10^{8}}{5 \cdot 10^{-4}}$
6.) $\frac{3.75 \cdot 10^{9}}{5.2 \cdot 10^{2}}$

Motes 2.4 - Adding and Subtracting numbers in Scientific Hotation
Steps to Adding or Subtracting Numbers in Scientific Notation

1. Readjust the numbers so the exponents are $\qquad$ .
2. Add or subtract the $\qquad$ .
3. $\qquad$ the result to scientific notation.
1.) $\left(2.45 \cdot 10^{7}\right)+\left(3.8 \cdot 10^{8}\right)$
2.) $\left(2.456 \cdot 10^{5}\right)+\left(6.0034 \cdot 10^{8}\right)$
3.) $\left(1.4 \cdot 10^{-5}\right)-\left(5.67 \cdot 10^{-6}\right)$
4.) $4.801 \cdot 10^{3}-2.2 \cdot 10^{7}$

## hotes 2.5 - Word Problenss with Scientific hotertion

1.) The outer wall of a large tourist attraction in Cambodia is about $1.1 \cdot 10^{3}$ meters long and $8.1 \cdot 10^{2}$ meters wide. Find the approximate area enclosed by the outer wall.
2.) The planet Mercury has an approximate mass of $3.3 \cdot 10^{23}$ kilograms. Mars has a mass of about $6.4 \cdot 10^{23}$ kilograms. How many times as great as the mass of Mercury is the mass of Mars? Round the coefficient to the nearest tenth.
3.) Ocean is $6.4 \cdot 10^{7}$ square miles. The area of the Arctic Ocean is about $5.4 \cdot 10^{4}$ square miles. a.) Find the approximate sum of the areas of the two oceans.
b.) About how much larger is the area of the Pacific Ocean than the area of the Arctic Ocean?
4.) A blue whale has a mass of about $190,000,000$ grams. The mass of a whale shark is approximately $2.6 \cdot 10^{4}$ kilograms.
a.) What is the approximate sum of the masses of the blue whale and whale shark?

b.) Given that the mass of white rhinoceros is about 4,850 kilograms, find the combined mass of the three animals.
